Iranian nuclear program

hide LOW

The Iranian nuclear program was originally started in the 1950s with the help of the United States. After the Islamic Revolution in 1979, the government temporarily disbanded the programme. Iran soon resumed the programme, albeit with less Western assistance than the pre-revolution era. Iran's current nuclear programme consists of several research sites, a uranium mine, a nuclear reactor, and uranium processing facilities that include a uranium enrichment plant. The Iranian government asserts that the programme's only goal is to develop the capacity for peaceful nuclear power generation, and plans to generate 6000 MW of electricity with nuclear power plants by 2010 but some nations believe it covers an attempt to acquire nuclear weapons. As of 2006 nuclear power does not contribute to the Iranian energy grid.

7 July 2005 London bombings

From Wikipedia, the free encyclopedia

Your **continued donations** keep Wikipedia running!

The **7 July 2005** **London bombings** were a series of coordinated terrorist bomb blasts that hit London's public transport system during the morning rush hour. At 8:50 a.m., three bombs exploded within fifty seconds of each other on three London Underground trains. A fourth bomb exploded on a bus nearly an hour later at 9:47 a.m. in Tavistock Square. The bombings killed 52 commuters and the four suicide bombers, injured 700, and caused a severe day-long disruption of the city's transport and mobile telecommunications infrastructure.

7 July 2005 London bombings

From Wikipedia, the free encyclopedia

*Your **continued donations** keep Wikipedia running!*

This is an **archived version** of this page, as edited by **Morwen** (**Talk** | **contribs**) at 09:18, 7 July 2005. It may differ significantly from **the current version**.

(diff) ← Older revision | Current revision (diff) | Newer revision → (diff)

> 🌐🕐 **This article documents a current event.**
> Information may change rapidly as the event progresses.

On July 7, 2005, explosions or other incidents were reported at various London Underground stations in central London, specifically Aldgate, Edgware Road, Kings Cross St Pancras, Old Street and Russell Suare tube station. They have been attributed to power surges.

The stations do not share the same line. The incidents led to the immediate evacuation of many stations and apparently now the entire London Underground network and much of the City of London.

7 July 2005 London bombings

From Wikipedia, the free encyclopedia

Your *continued donations* keep Wikipedia running!

This is an archived version of this page, as edited by Merovingian (Talk | contribs) at 10:00, 7 July 2005. It may differ significantly from the current version.

(diff) ← Older revision | Current revision (diff) | Newer revision → (diff)

This article documents a current event. Information may change rapidly as the event progresses.

On July 7, 2005, explosions were reported at various London Underground stations in central London, specifically Aldgate (at 08:49 local time, in London's rush hour), Edgware Road, King's Cross St Pancras, Old Street and Russell Square tube station.

An explosion on a tourist bus between Tavistock Square and Russell Square area has been confirmed. They were initially attributed to power surges, but rumours have indicated the possible existence of "at least one explosive device". At least 90 casualties have been reported, but no dead have been officially confirmed, although reports of severed limbs and bodies exist. Hospitals have been placed on alert, with casualties being taken to St Mary's Hospital, Paddington. Reports of explosions on two other buses at Aldgate East and Edgware Road have now been confirmed.

There have also been reports of an explosion on Houndsditch in the City of London, near Liverpool Street station.

The stations do not share the same line (Russell Square and King's Cross are adjacent on the Piccadilly Line, Old Street is on the Northern Line, and the others, as well as King's Cross are all on the Circle Line). The National Grid has said it has detected no problems with the power network.

CNN speculated that the co-ordinated nature of the explosions seemed to suggest a group such as Al Qaeda, a group opposing the 31st G8 summit.

The incidents led to the immediate evacuation of many stations and much of the City of London, as well as the complete shut-down of the London Underground network. Roads near the affected stations were closed off, severely affecting road traffic. Mainline services into London stations Euston, Paddington and King's Cross are terminating outside the city.
