

A Formal Security Analysis of ZigBee (1.0 and 3.0)

*Li Li, **Proyash Podder, *Endadul Hoque

*Syracuse University

**Florida International University

IoT Goes Nuclear

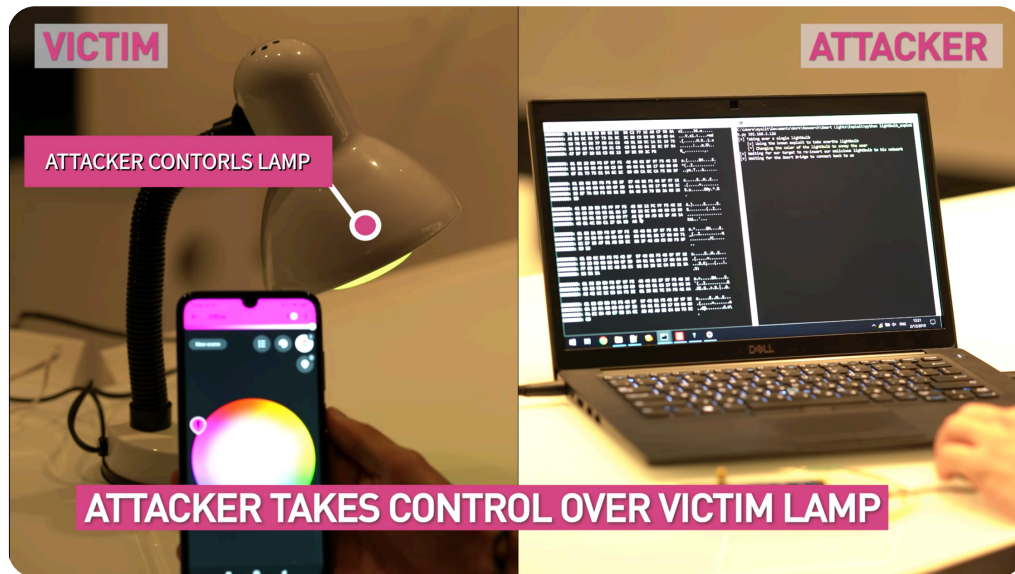

Nearby IoT devices can infect each other with a worm like nuclear chain reaction

The Story Continues ...

Attackers can cause damage to home and business IP network too

Why is a security flaw discovered in 2016 still toxic?

ZigBee Production Flow

ZigBee Devices on Market

Amazon Echo Plus (2nd Gen+)

Samsung SmartThings

Philips Hue by Signify

IKEA

Xfinity by Comcast

Wink

Tuya

Lumi

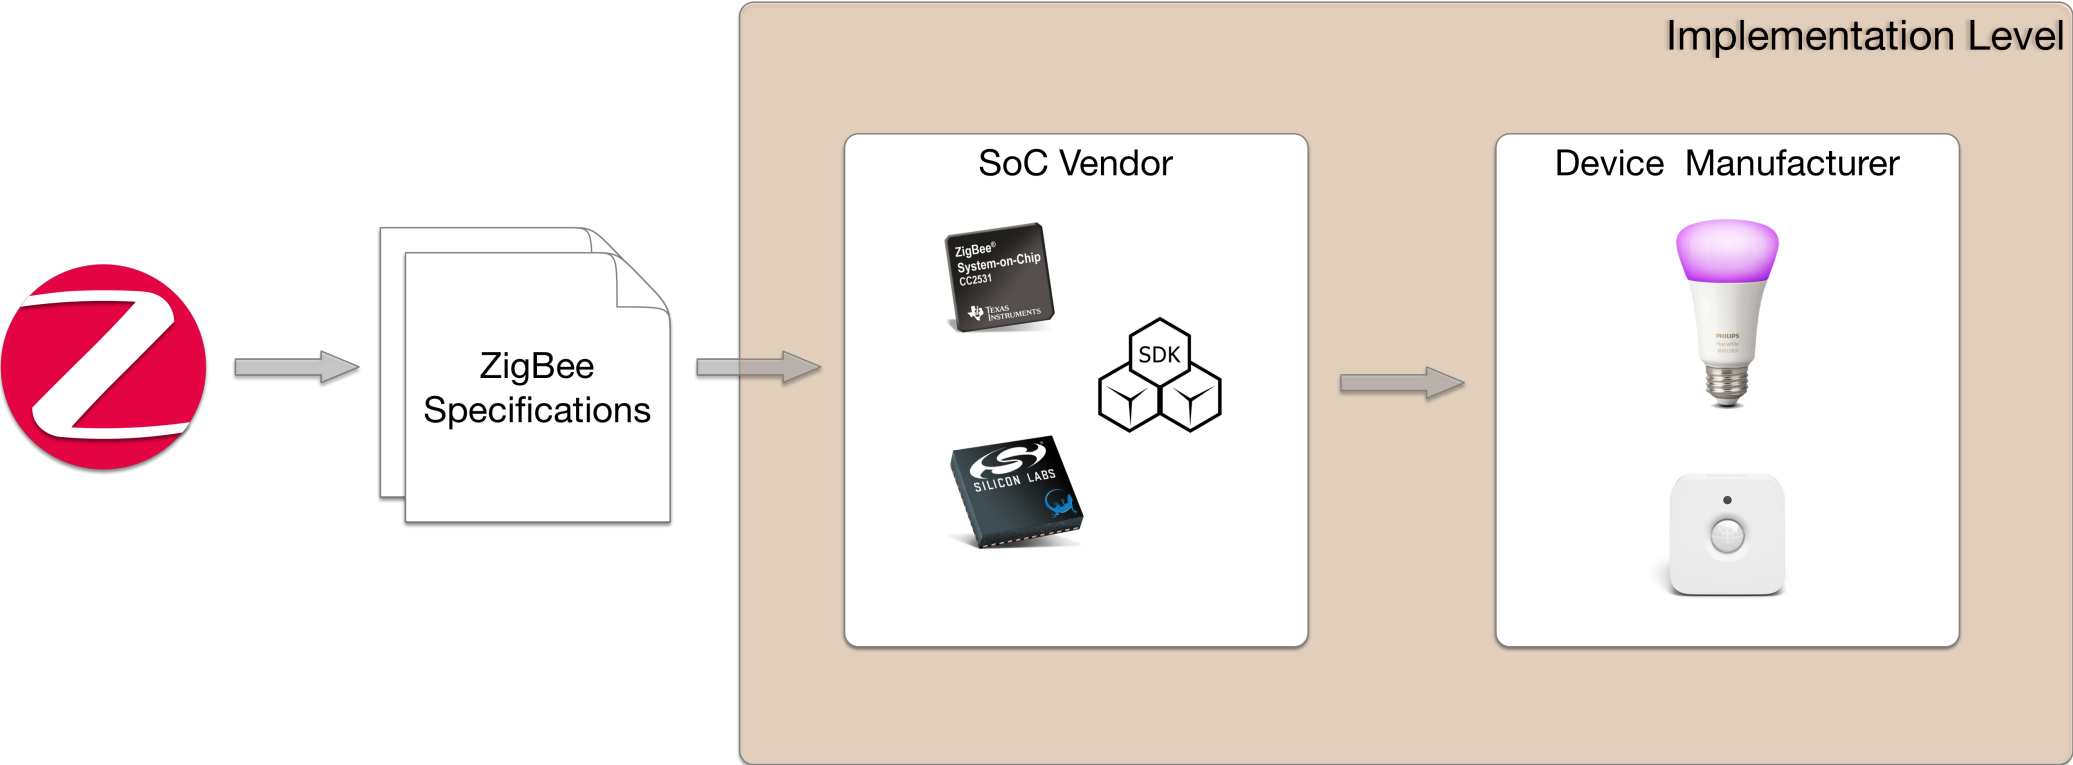

By 2023, there will be 4.5 billion 802.15.4 mesh devices sold worldwide, most of which will use ZigBee.

ZigBee in Your Home

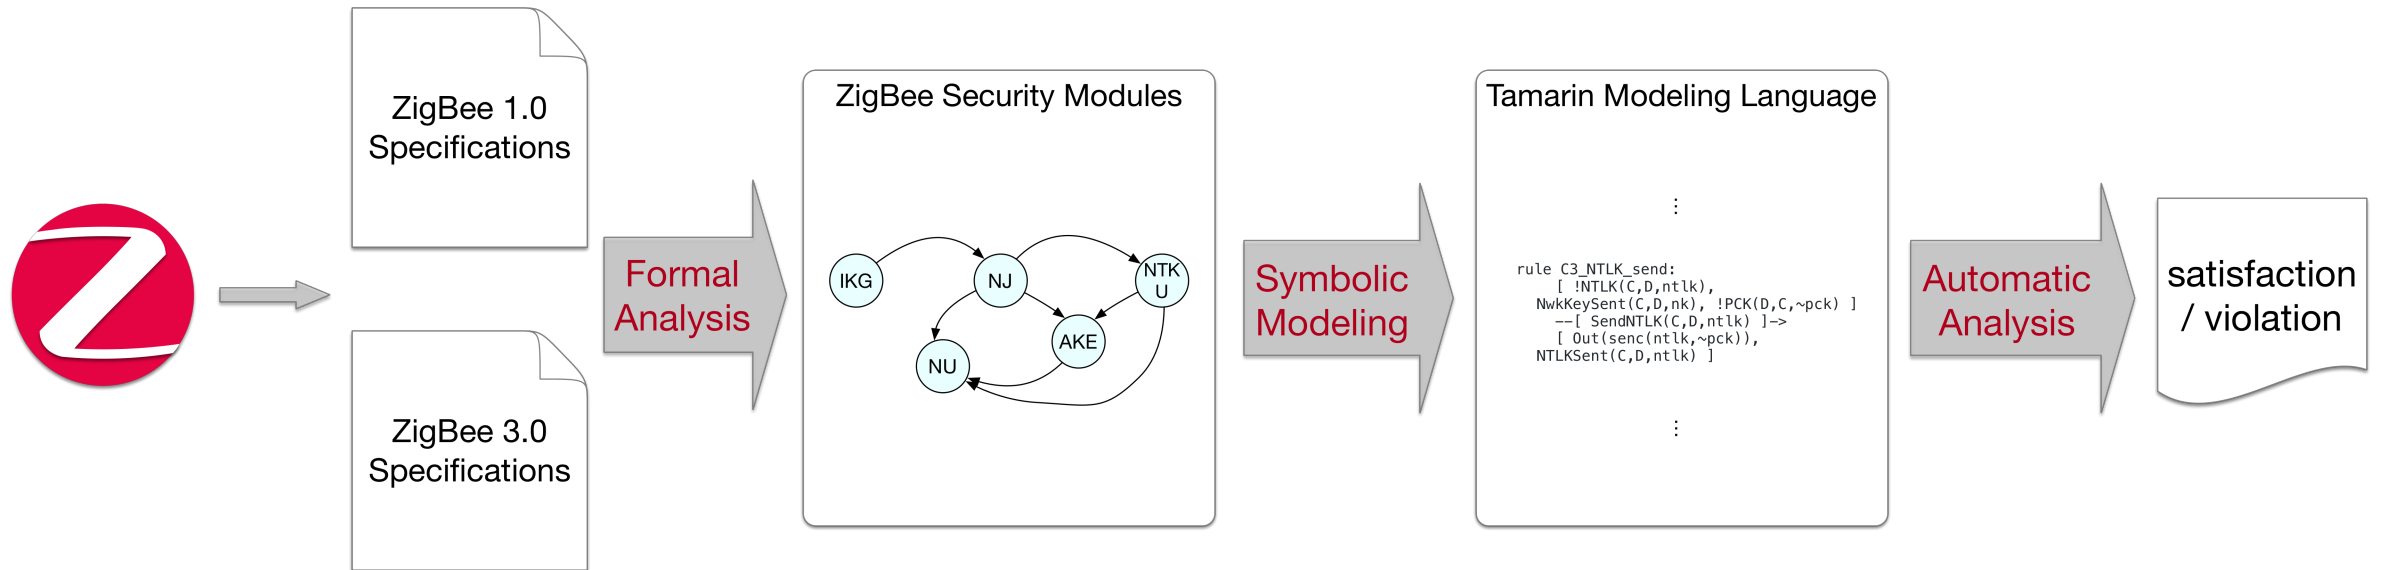

ZigBee Security Analysis

Existing Approach

ZigBee Security Analysis

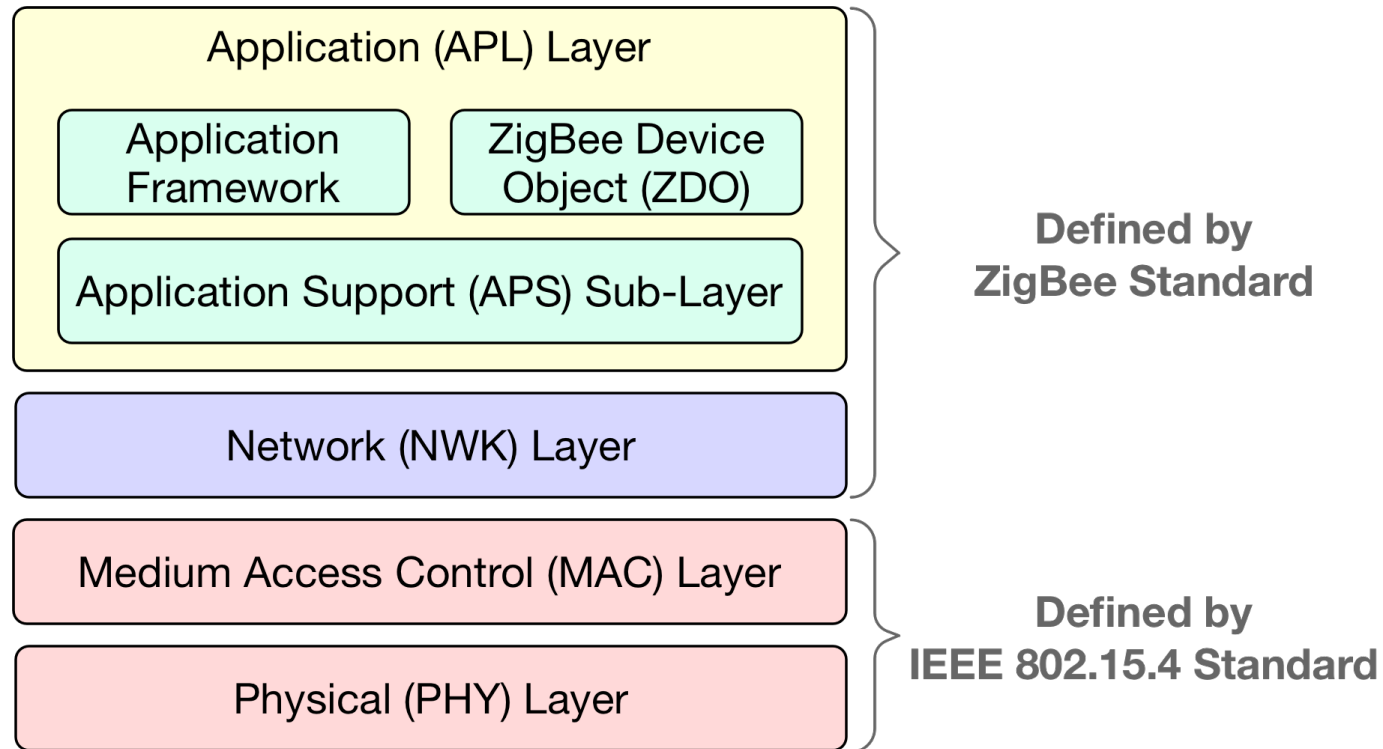

Our Approach

The background features a repeating geometric pattern of interlocking diamond shapes. The central diamond is white and contains the text. The surrounding diamonds are light gray, with some overlapping in shades of blue and dark gray. The text is centered within the white diamond.

ZigBee Background

ZigBee Protocol Stack

Device Types

Coordinator

Each ZigBee network must have one.

Responsible for establishing, executing, and managing the overall ZigBee Network.

Router

Optional.

Routing data between coordinator and end device.

End Device

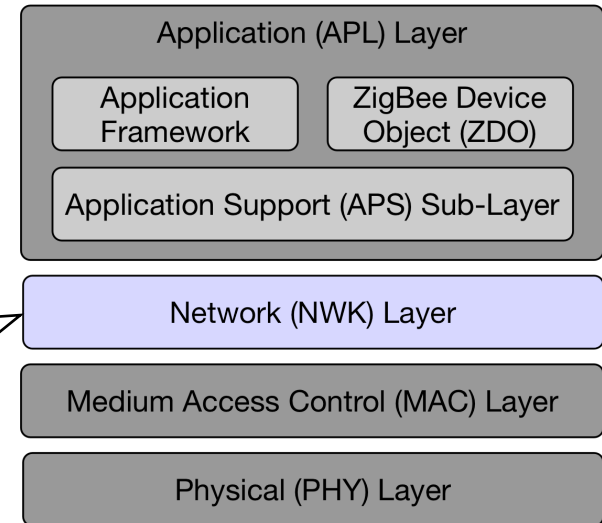

Simple node performs actual actions.

E.g. smart light bulb, switch, motion sensor, etc.

Keys in ZigBee

Network Key

- Used in the network layer.

Application (APL) Layer

Application Framework

ZigBee Device Object (ZDO)

Application Support (APS) Sub-Layer

Network (NWK) Layer

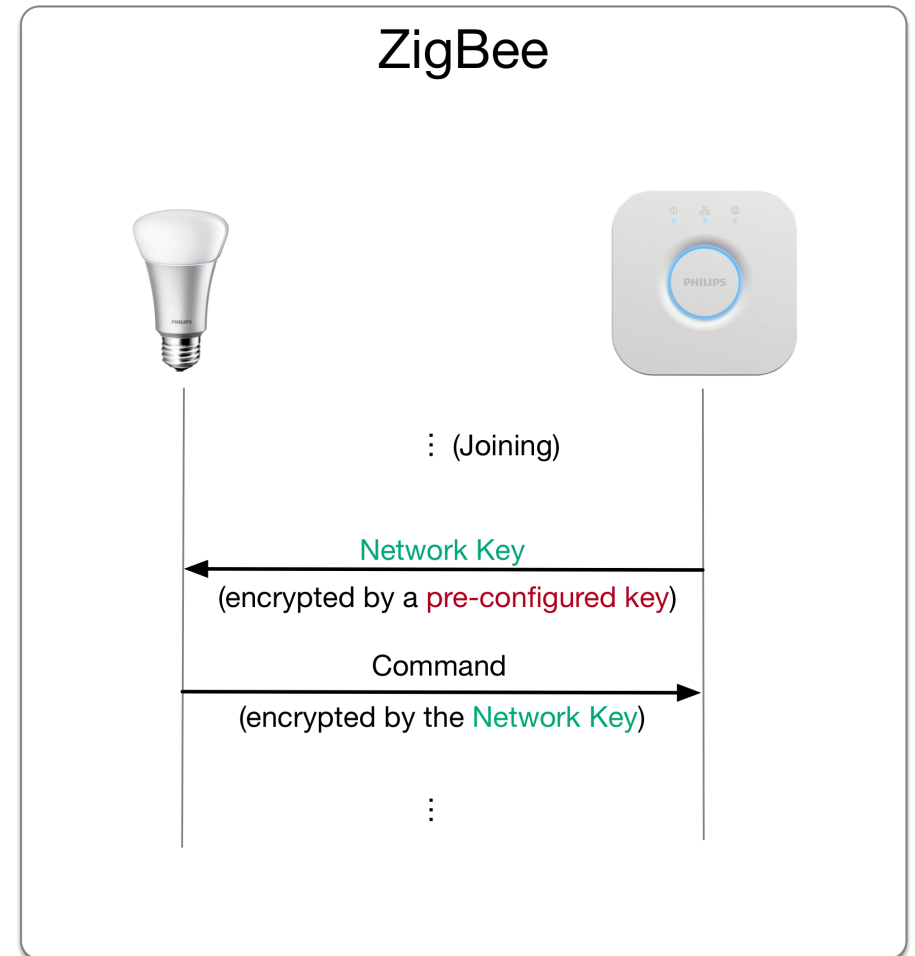

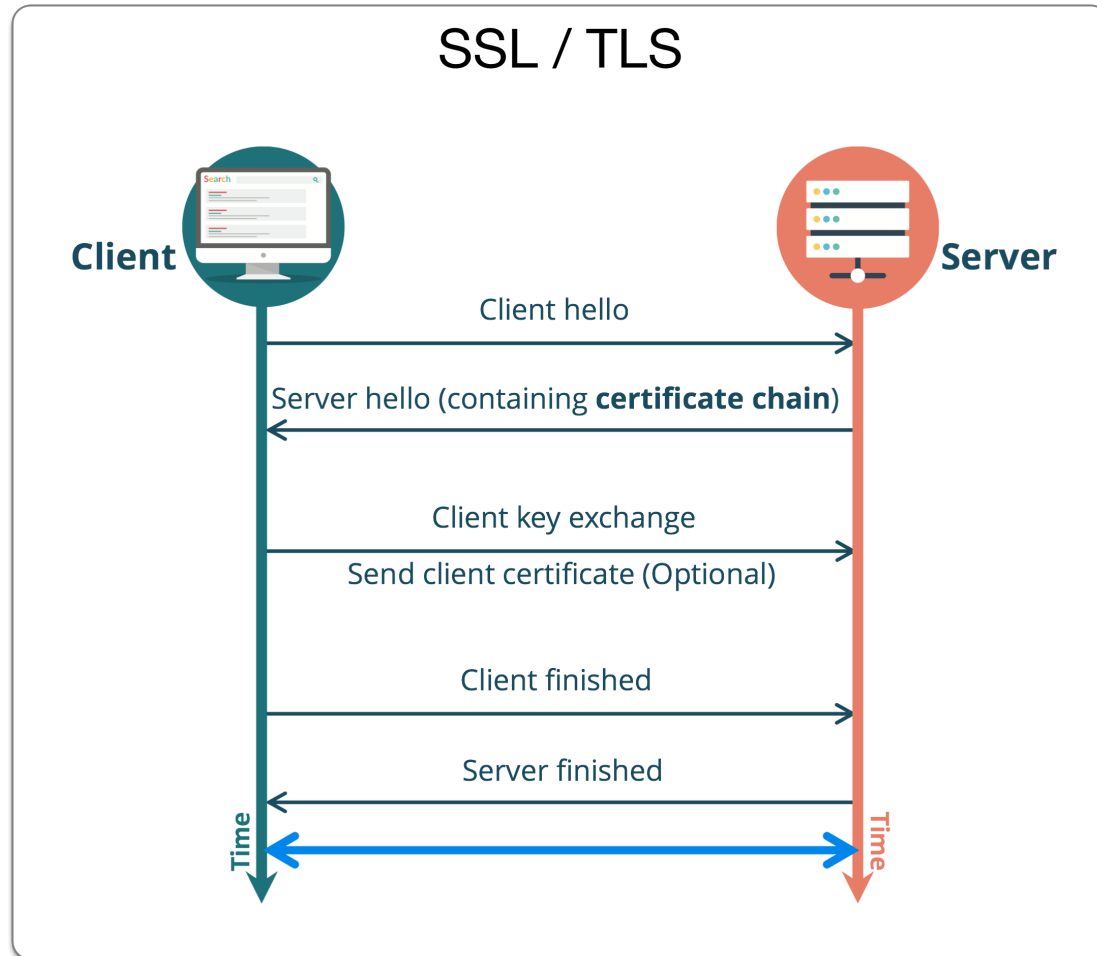

Medium Access Control (MAC) Layer

Physical (PHY) Layer

Link Keys

- Used in the application support sub-layer.
- Each end device has a pre-configured link key.

The Key of the Keys

Pre-Configured Key in ZigBee 1.0 and 3.0

ZigBee 1.0

pre-configured key is globally known

ZigBee 3.0

pre-configured key is generated using the install code

Modeling ZigBee

Threat Model

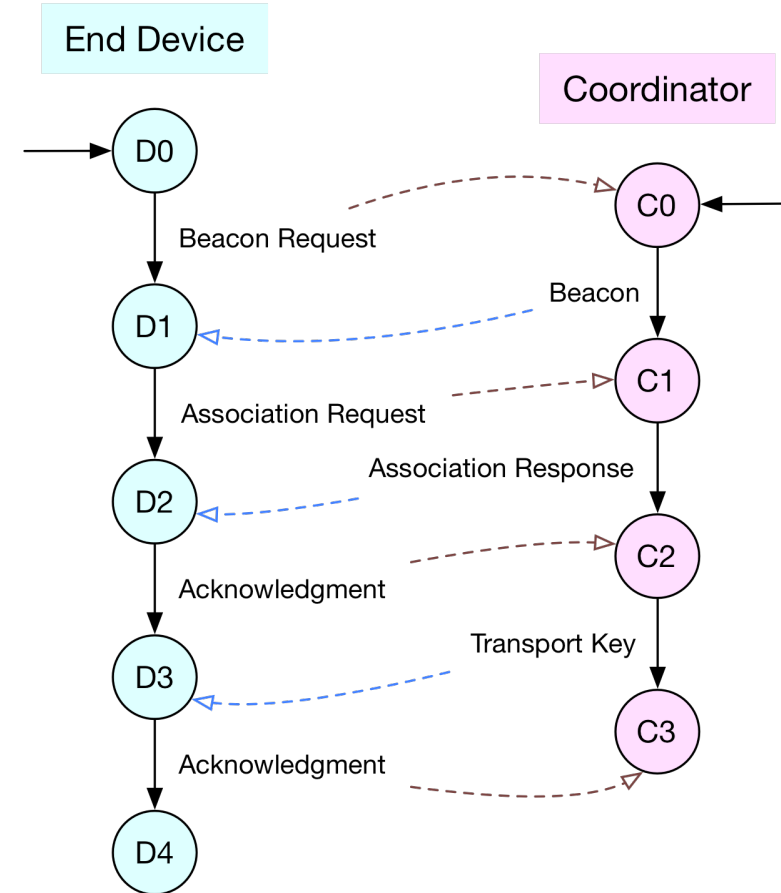

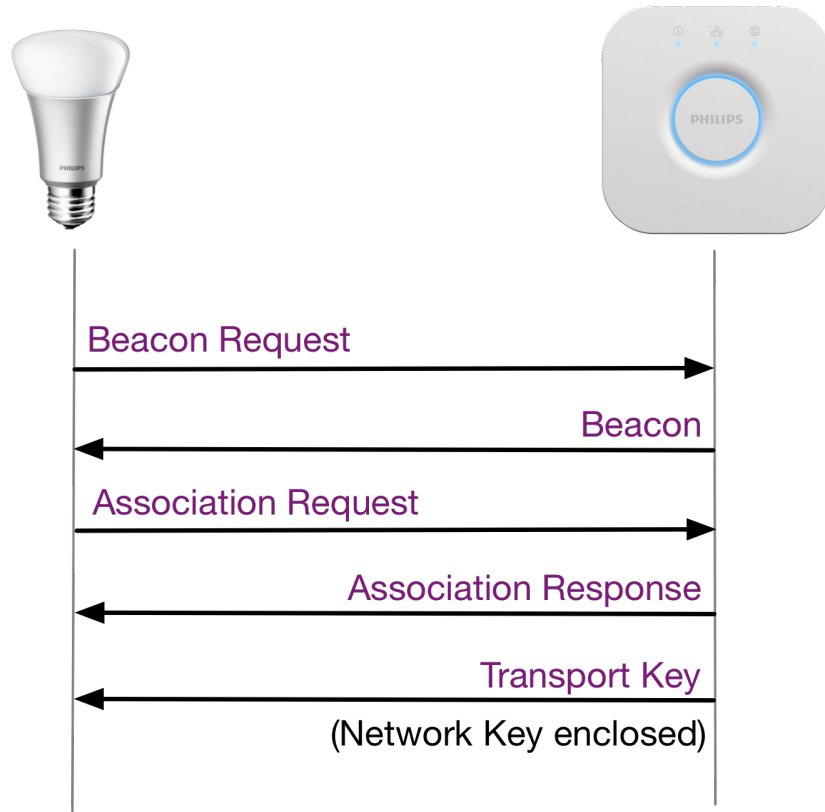

Dolev-Yao adversary model

- Delete, inject, modify and intercept messages on the network.
- Replay or combine messages learned from previous messages.

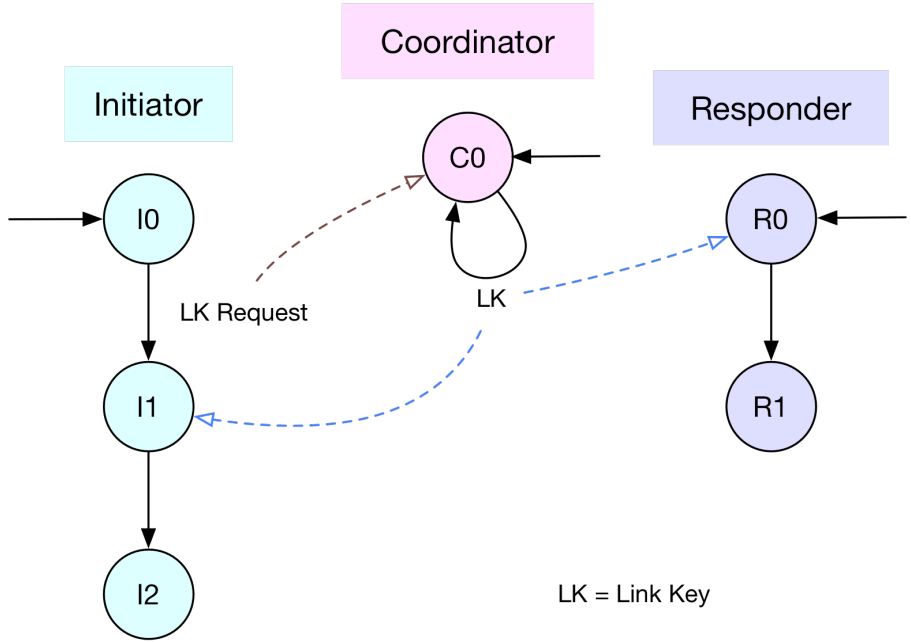

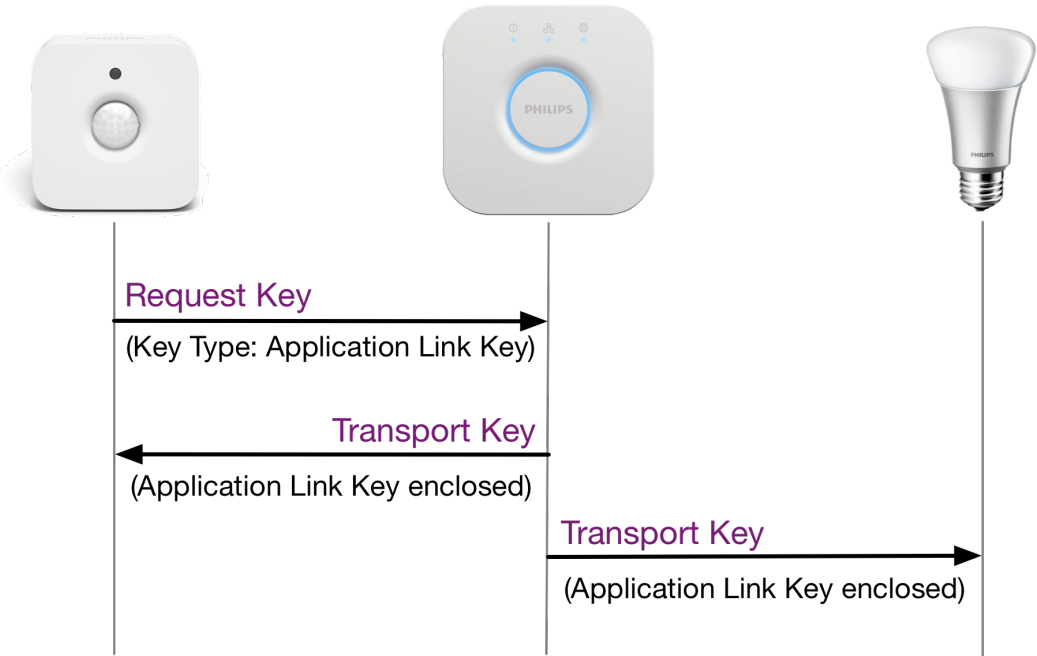

Assumptions

- The user is honest and always installs devices properly.
- Devices are certified by the ZigBee Alliance and never compromised.
- The cryptographic primitives are secure.

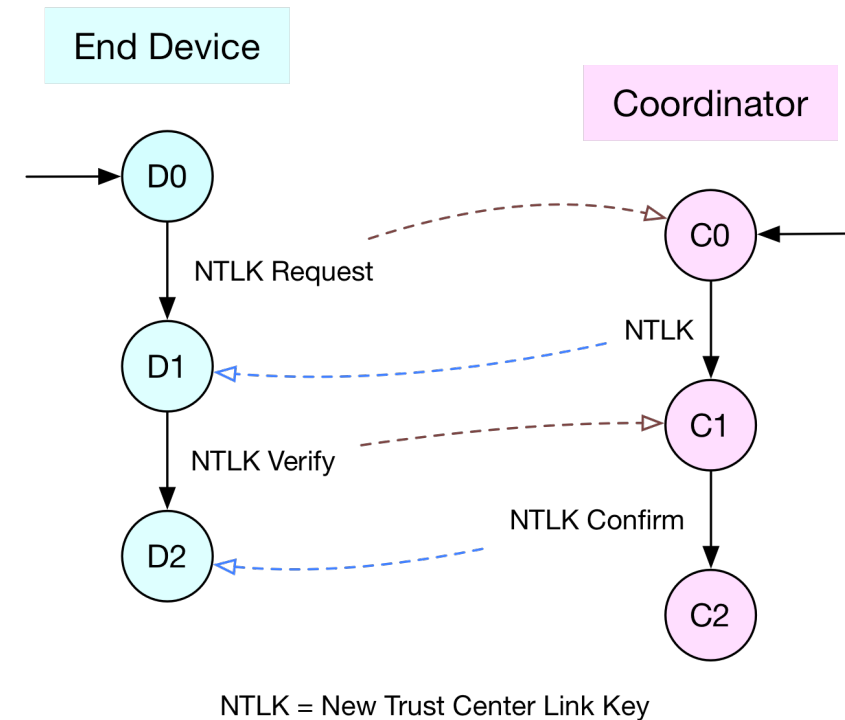

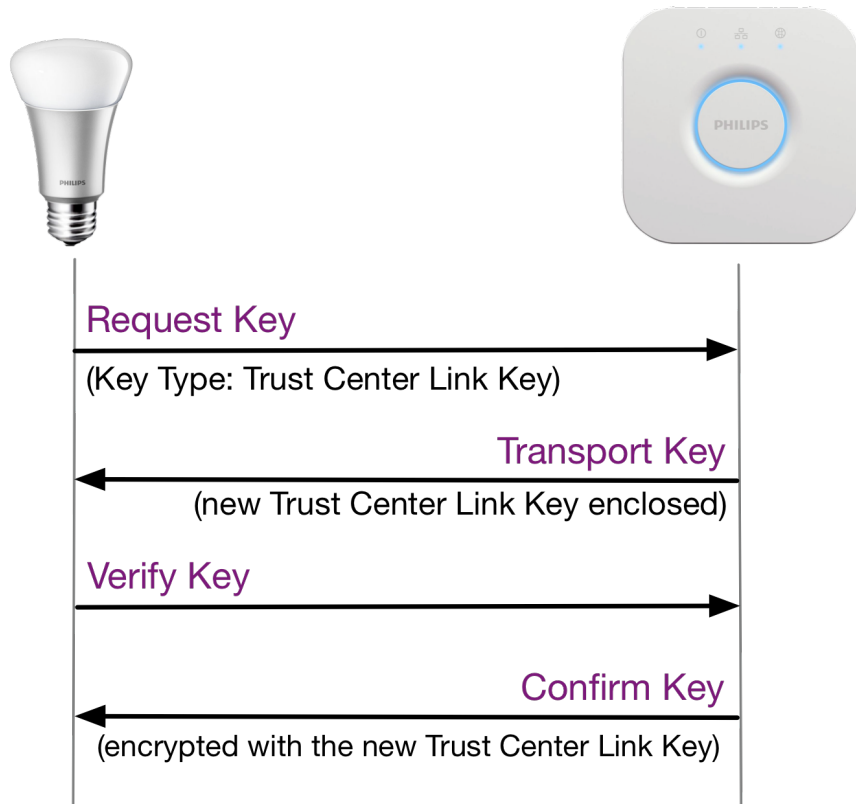

Network Joining Module

Application Link Key Establishment

New Trust Center Link Key Update

Tamarin Prover

What's it?

A powerful tool for symbolic modeling and security analysis

Prior usage

Previously used to analyze complex protocols like TLS 1.3 and 5G Authentication

Features

Dolev-Yao adversary model is built-in

An Example of Modeling using Tamarin

```
rule Key_Generation:  
[Fr(~k)] --[Key_generated(~k)]-> [!Key(~k)]
```

```
rule A_Send_Message:  
[!Key(k), Fr(~m)] --[A_Sent(~m)]-> [Out(senc(~m,k))]
```

```
rule B_Receive_Message:  
[In(senc(m,k))] --[B_Received]-> []
```

```
lemma message_secrecy:  
  "All m #i. A_sent(m) @ i ==> not Ex #j. K(m) @ j"
```

Modeling ZigBee using Tamarin

Key Generation

```
rule C_network_key_generation:  
  [ Fr(~nk) ]  
  --[ SecretNK(~nk) ]->  
  [ !NwkKey($C,~nk) ]
```

```
rule C_new_link_key_generation:  
  [ Fr(~ntlk) ]  
  --[ SecretNTLK(~ntlk) ]->  
  [ !NTLK($C,$D,~ntlk) ]
```

```
rule D_pck_generation:  
  [ Fr(~pck) ]  
  --[ SecretPCK(~pck) ]->  
  [ !PCK($D,$C,~pck) ]
```

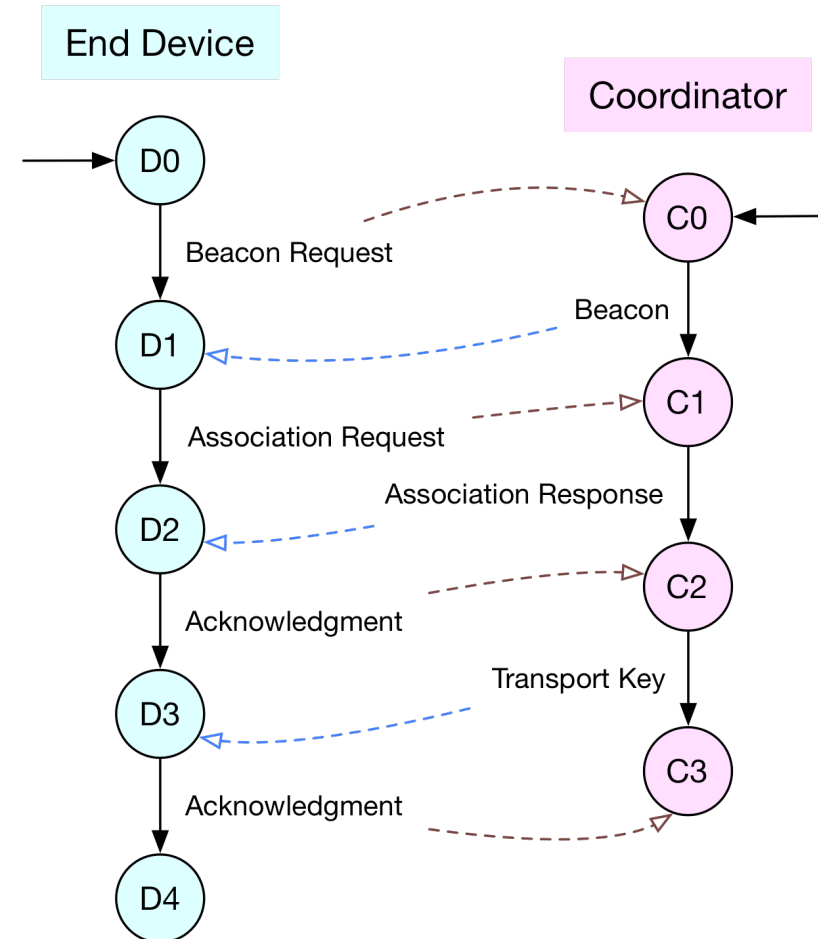

```
rule D_lk_generation:  
  [ Fr(~lk) ]  
  --[ SecretLK(~lk) ]->  
  [ !LK($D1,$D2,~lk) ]
```

Modeling ZigBee using Tamarin

Network Joining Module

```
rule C2_1_Send_Nwk_key:
  let
  pck = 'pck'
  in
  [ In(<D,pck>), !NwkKey(C,nk), Beacon('panID'),
    !ZigbeeV1() ]
  --[ Send_Network_Key(C,D,nk) ]->
  [ Out(<D,C,senc(nk,pck)>), NwkKeySent(C,D,nk),
    !PCKShared(D,C,pck) ]
```

```
lemma secrecy_NK:
  "All x #i.
    SecretNK(x) @ i ==> (not(Ex #j. K(x) @j))
  | (Ex C #r. RevNK(C) @ r)
  | (Ex C D #r. RevPCK(D,C) @ r)
  | (Ex C D #r. RevNTLK(C,D) @ r)"
```

Modeling ZigBee using Tamarin

Out-of-Band Channel Modeling

```
rule ChanOut_S :  
  [ Out_S($A, $B, x) ]  
  --[ ChanOut_S($A, $B, x) ]->  
  [ !Sec($A, $B, x) ]
```

```
rule ChanIn_S :  
  [ !Sec($A, $B, x) ]  
  --[ ChanIn_S($A, $B, x) ]->  
  [ In_S($A, $B, x) ]
```

Results: Secrecy of Keys

ZigBee 1.0	Result
Network Key Secrecy	violated
Pre-Configured Link Key Secrecy	violated
Application Link Key Secrecy	violated

ZigBee 3.0	Result
Network Key Secrecy	verified
Pre-Configured Link Key Secrecy	verified
Application Link Key Secrecy	verified
New Trust Center Link Key Secrecy	verified

ZigBee 1.0 : use globally known pre-configured key.

ZigBee 3.0 : use install-code over out-of-band channel.

Tamarin can find a trace denoting how the adversary can learn each of these keys.

Results: Lowe's Authentication Properties

Security Property	Result
Aliveness	verified
Weak Agreement	verified
Non-Injective Agreement	verified
Injective Agreement	verified

Both ZigBee versions satisfy all the authentication properties.

Real-Life Experiment

```
▸ Frame 14: 73 bytes on wire (584 bits), 73 bytes captured (584 bits) on interface 0
▸ IEEE 802.15.4 Data, Dst: 0x098a, Src: 0x0000
▸ ZigBee Network Layer Data, Dst: 0x098a, Src: 0x0000
▾ ZigBee Application Support Layer Command
  ▸ Frame Control Field: Command (0x21)
    Counter: 196
  ▾ ZigBee Security Header
    ▸ Security Control Field: 0x30, Key Id: Key-Transport Key, Extended Nonce
      Frame Counter: 14
      Extended Source: Samjin_00:02:01:23:cf (28:6d:97:00:02:01:23:cf)
      Message Integrity Code: 02018df8
      [Key: 5a6967426565416c6c69616e63653039]
      [Key Label: ]
    ▾ Command Frame: Transport Key
      Command Identifier: Transport Key (0x05)
      Key Type: Standard Network Key (0x01)
      Key: 38b2efc1e71690978bf3038e789b473c
      Sequence Number: 0
      Extended Destination: Samjin_00:01:06:79:d3 (28:6d:97:00:01:06:79:d3)
      Extended Source: Samjin_00:02:01:23:cf (28:6d:97:00:02:01:23:cf)
```

Our experiments done with Samsung SmartThings Hub (Ver. 3) shows that the network key can be captured.

Summary

- Developed symbolic models of ZigBee 1.0 and 3.0 from the specifications.
- Derived security properties from ZigBee specifications.
- Proved satisfaction/violation of those security properties using Tamarin Prover.
- ZigBee 3.0 is a more secure choice, but there's still many devices using ZigBee 1.0.

Thank You!

Li Li
